

Quiz 1 (part 1) - Computational Physics I

NAME: _____ SCORE:

Date: Friday 15 March 2024 Duration: 45 minutes

Credits: 10 points (5 questions) Type of evaluation: LAB

This quiz is individual and has two parts: Part 1 is closed-book, in-class, and contains short-answer questions. Part 2 is take-home and contains long application problems.

Provide short and concise answers to the following items:

1. (2 points) **Programming languages**

Explain the difference between low-level and high-level programming languages.

2. (2 points) **Python basics**

List 4 types of python data structures, and briefly explain which one you would pick to store a) only numbers and b) numbers and strings.

3. (2 points) **Python Input/Output**

Indicate 2 methods that we can use to carry out data input/output in python, and explain one advantage and one disadvantage of each method.

4. **(2 points) Regressions**

Indicate the main steps that we need to follow to carry out a meaningful regression using empirical data in python.

5. **(2 points) Data fitting methods**

Explain the difference between the least-squares (LM) and the χ^2 data fitting methods.
